E-learning

www.atlas-ats.com

Despite the efforts made by companies, demand for training remains high.

However, current training supply is either incomplete or unsatisfactory.

Companies in search of training tailored to their needs, are increasingly using external solutions.

The dispersion of distribution networks and teams requires a comprehensive approach that only e-learning, a means of communication and modern training, can provide.

E-learning
with Atlas Technology Solutions

E-learning consists in bringing training to learners using new technologies based on multimedia resources. It allows the training of one or more persons from their computer by offering countless opportunities for collaboration and interactivity.

A solution to the problems of logistics by workforce gathering and teacher availability

A flexible and modular system, adaptable to small numbers as well as to large ones

A uniform training for a heterogeneous audience

Benefits for the company

- Training of a large number of learners
- Gain in productivity
- Ongoing assessments of the learner's performance
- A reduction in the training costs
- Monitoring of learners' attendance
- Updating knowledge at any time
- Reimbursement possibilities of the training costs by the accredited bodies

Benefits for the learner

- Individualized learning
- Time saving
- Ease of access
- Flexible scheduling
- Customized monitoring
- Opportunities for interaction with other learners
- Knowledge evaluation through exercises and MCQ (Multiple Choice Questions)

The approach of Atlas Technology Solutions

ATS is a company specialized in e-learning. Its mission is to provide its customers with an online functional training. ATS can assist companies in every stage of their project, from the analysis of the training needs to the provision of courses on the platform.

Our training offer

- Availability of a range of business courses
- Course content tailored to the needs of the company
- Drafting of courses on request
- Personalized monitoring, organization of tests and examinations
- Assistance to corporate training services
- Training of trainers

Training engineering

ATS can help companies with:

- the assessment of training needs
- the curriculum development
- the establishment of schedules
- budget estimates
- the analysis of training results

Using modern means of communication, the offer is **scalable**, **individualized** and **flexible**

Several training levels:
Beginner, **Intermediate**, **Advanced** or **Expert**

The ATS e-learning project is organized around a technical center and an educational center.

The technical center

The ATS computer team has designed a platform for e-learning to host the courses which the teaching team has developed. The platform is made available to customers via the Internet.

The educational center

It includes specialized trainers in charge of developing and validating the course content. ATS teams can intervene in the training as well as in the engineering of training.

The training process

Trainers develop courses and make them available to learners on the server.

01

Technicians ensure server maintenance.

02

Learners take courses by connecting to the server.

03

Training
with Atlas Technology Solutions

The educational approach

- It combines theory and practice.
- Learners must acquire theoretical basic concepts as well as expertise.

Each course is composed of several chapters including:

- definition of objectives
- the course itself with images and animations
- a summary
- exercises with answers

At the end of the course the learner will find at his disposal:

- a glossary
- a list of common questions
- documents illustrating the course
- summary sheets
- multimedia resources

Learners can benefit from a vocal backing for all courses.

Training follow-up

The method implemented by ATS provides a maximum training efficiency:

- regular and personalized monitoring of each course is organized by the ATS teams or by corporate teams.
- for each learner, a personalized report with grades and attendance tracking will be periodically provided to the company.

Insurance

Insurance is a technical field covering many specialties.
Through a comprehensive program, ATS offers an extensive training for all life and non-life insurance classes of business.
Courses are designed by insurance professionals with a 40-year experience in the training field.

The insurance training

It is intended as a priority for:

- the staff of distribution networks
- the staff of insurance companies
- bank insurers
- persons wishing to acquire a training in insurance
- insurance managers of commercial and industrial companies

The training fields

- The insurance fundamentals
- The insurance contract
- The motor insurance
- The fire insurance
- Miscellaneous risks insurance
- The comprehensive homeowners' insurance
- The third party liability insurance
- Personal insurance
- Insurance accounting
- Reinsurance
- Technical risks
- Agency management

Insurance training is flexible:
each company or learner can adapt it to their needs.

Application for training may be made for all modules or some of them.
